💼 Professional Experience

EZ-AD TV   Full-Stack Web Developer   4/19 - 9/19

Tech Stack: Vue.js, jQuery, Bootstrap, PHP, MySQL, Apache, Mac

Responsible for every aspect of the main and sister company administrative websites, including implementing all changes and debugging potential issues, for both the front end and back end:

Web Development:

- Produced many pages for both administrative websites to display tables of information from our database, for a variety of uses. These tables contained paginated data, often mapped from multiple database tables, parsed to be human-readable and concise, with sortable columns and filters for applicable fields which included predictive text inputs. Some of the information used in these tables relied on lengthy queries that would be cached periodically using PHP scripts for quicker future reference. I eventually compiled all of these features into a boilerplate with documentation for convenient future reuse.
- Improved time-management by creating employee notifications, timers, and violations to prevent tardiness, missing lunch, and overtime, as well as designed an interactive weekly timesheet overview for use by management.
- Revised the company's invoicing system by adding the ability to edit invoices for error correction and implementing automatic late fees, as well as generated email summaries for failed auto-payments and audit reports.
- Designed a display with the ability to reply to mass text message responses. Also assembled a similar display for technical support tickets and live chat logs.
- Developed a reusable Terms of Service system and pages for initializing, sending, displaying, and tracking individual agreements for each business.
- Compiled standard performance, accessibility, and SEO audits for all public pages and fixed any issues.

Miscellaneous:

- Communicated and directed remote developers on tasks and changes to complete. Helped them gain access to certain administrative or development permissions and provided data as needed for local testing.
- Performed minor hardware repairs for myself and other employees, and was responsible for updating backup restores, used to set up new employee laptops.
- Assisted with employee onboarding, video production, and mobile app testing.

🎓 Education

Valencia High School:	2005-07
Academy of the Canyons:	2007-09
College of the Canyons:	2009-12

🔧 Skills

JavaScript
React
Vue
Node
jQuery
PHP
CSS
HTML
RESTful APIs
Postgres
MySQL
Express
Axios/Ajax
Redux
